

RED BANDED AGATE

Some Agate stones are named for their specific locality or appearance like this beautiful red color. This banded agate has layers of agatized quartz, giving an appearance of bright bands or stripes. Agate tends to go to work straight on the cause instead of the symptom of an issue. It is believed to improve mental functions and can help with issues of clarity and stability. Although Agates work very gently and slowly, they do tend to have a lasting impact.
