

## MOSOSAURUS

*Undisputed Emperors of the high Cretaceous seas the Mososauridae were a family of enormous serpentine marine reptile, and the scourge of all ocean dwelling creatures.*

*With a heavy barrel shaped body, and powerfully propulsive tail, it knew no rivals in the waters it prowled. Growing up to 60 feet, 18 meters in length, having stocky powerful teeth, and double hinged jaws like a snake, enabled it to swallow it's prey whole. These teeth were discovered in the Phosphate deposits of Northwestern Morocco.*
